1. What term did John McCarthy coin in 1955?
  - Cybernetics
  - Computing Revolution
  - Artificial Intelligence
  - Machine Learning
2. Why was John McCarthy known as "Uncle John" at MIT?
  - Due to his eccentric fashion sense
  - Because of his fondness for chess
  - His habit of answering questions days later
  - For pioneering virtual assistants
3. What was the first AI game built by John McCarthy?
  - Chess
  - Tic-Tac-Toe
  - Checkers
  - Go
4. What did John McCarthy envision in the 1970s that resembles today's concept of e-commerce?
  - Virtual Reality
  - Time-shared Systems
  - Artificial Intelligence
  - Robotics
5. How did McCarthy contribute to the development of voice recognition technology?
  - Inventing new hardware
  - Developing the LISP language
  - Collaborating with Apple
  - Creating the first AI game

6. What significant idea did McCarthy work on that enabled the creation of servers, cloud computing, and the internet?
  - Artificial Intelligence as a field
  - Time-shared Systems
  - E-commerce
  - Chess-playing AI
7. Which computer club, including Steve Jobs and Steve Wozniak, visited Stanford's AI lab?
  - Microsoft Computer Club
  - IBM Computer Club
  - Homebrew Computer Club
  - MIT Computer Club
8. What did John McCarthy predict in the late 1990s regarding robots?
  - Increased automation in industries
  - Human-like emotions in robots
  - The development of virtual reality
  - Advances in quantum computing
9. What did John McCarthy establish at MIT and Stanford throughout his career?
  - Robotics Research Centers
  - AI Laboratories
  - Quantum Computing Labs
  - Cybernetics Institutes
10. What did McCarthy's time-shared systems concept enable?
  - Development of AI games
  - Creation of servers and cloud computing
  - Introduction of e-commerce
  - Pioneering voice recognition technology
