ACTIVITY #1

1. Fill in the blank activity.

1. Stemming is a linguistic process that involves eliminating _____ and _____ from words to reduce them to their root or stem.

2. Stemming is commonly used to enhance _____, which is the way computer programs understand _____.

3. By reducing words to their stem, stemming makes it easier to find patterns in a text, especially when words on similar topics become _____ terms.

4. Lemmatization differs from stemming as it uses dictionaries to find the base or _____ of a word, also known as the _____ of inflected forms.

5. Natural Language Processing (NLP) is crucial for SEO, and stemming can be used to improve search functions on a website and other _____ or internal features.
