Lesson 2. Keywords. Useful terminology about OWASP

Developer: create computer applications that protect systems and networks. Specifically, they design, test, implement, and manage programs that safeguard against cyberattacks and other unauthorized breaches.

Nonprofit: an entity that is created and operated for charitable or socially beneficial purposes rather than to make a profit

Flaw: unintended functionality. This may either be a result of poor design or through mistakes made during implementation

Sensitive files: includes personal data but has a wider scope, which encompasses data that if disclosed could cause harm or adverse consequences for the individual concerned

Cloud infrastructure: the collection of hardware and software elements such as computing power, networking, storage, and virtualization resources needed to enable cloud computing

Mitigation: the application of policies, technologies and procedures to reduce the overall impact and risk of a cyber threat

Failure: the moment when a cybersecurity system fails to stop an attack it should have been able to prevent.
