ACTIVITY

1. **True and false activity about the previous reading**

   1. Vulnerabilities are weaknesses in a computer system that can be exploited by an attacker.
   2. The process of vulnerability management only includes identifying vulnerabilities, not fixing them.
   3. Threats are always intentional, such as cyberattacks.
   4. Risk management involves analyzing the severity and probability of each risk and taking steps to control them. (True)
