

UNIT 2

INTERVIEW FOR PROGRAMMERS AND BEST PRACTICES IN PROGRAMMING

1. General objectives

- Understand basic concepts and terminology related to software development.
- Utilize essential vocabulary related to software development and its proper usage in written contexts, enabling learners to identify and apply them in relevant reading materials.
- Extract and interpret information from texts related to software development at a basic level.

SKILLS TO BE DEVELOPED

- **Linguistic competence:** Recognize and understand basic vocabulary, concepts and phrases related to fundamental software processes.
- **Pragmatic competence:** Comprehend basic written descriptions through reading.
- **Sociolinguistic competence:** Contextualize vocabulary within real-world scenarios, enhancing abilities to relate linguistic forms to their practical uses in the field.
- **Topical Competence:** Read and understand texts related to contemporary topics in software development, such as recent innovations in the field.
