

UNIT 6

BASICS OF INTERNET OF THINGS

General objectives

- Introduce and familiarize learners with fundamental vocabulary and terms associated with the Internet of Things (IoT).
- Develop understanding of short articles, informational brochures, or basic explanatory texts that describe what IoT is, how it functions, and its typical uses in a clear and simple manner.
- Enable practical application of IoT-related vocabulary in relevant contexts.

SKILLS TO BE DEVELOPED

- **Linguistic competence:** Recognize and understand basic vocabulary, concepts and phrases related to the Internet of things.
- **Pragmatic competence:** Comprehend basic written descriptions through reading.
- **Sociolinguistic competence:** Contextualize vocabulary within real-world scenarios, enhancing abilities to relate linguistic forms to their practical uses in the field.
- **Topical Competence:** Read and understand texts related to contemporary topics in technology, such as recent innovations in the field.
