ACTIVIDAD

Answer the multiple - choice questions based on the previous reading text.

Se alcanza la aprobación con el 70%

1. What is one of the main advantages of cloud computing in terms of cost optimization?

   - Increased capital expenses
   - Elimination of hardware and software purchases
   - Dependence on onsite data centers
   - Enhanced IT management chores

2. What does "scaling elastically" mean in the context of cloud computing services?

   - Fixed allocation of resources
   - Dynamic adjustment of IT resources based on demand
   - Limited availability of computing power
   - Manual provisioning of storage and bandwidth

3. How do most cloud computing services handle resource provisioning?

   - Lengthy manual processes
   - Automatic and on-demand with self-service options
   - Dependence on physical visits to data centers
   - Minimal flexibility in resource allocation

4. Why does cloud computing enhance productivity, according to the text?

   - Increased racking and stacking tasks
   - Elimination of hardware setup and patching
   - More time-consuming IT management chores
   - Reduced flexibility for IT teams

5. What is the benefit of cloud computing related to performance?

   - Limited network latency for applications
   - Dependence on a single corporate datacenter
   - Slower and less efficient computing hardware
   - Decreased economies of scale
