

Tokenization:

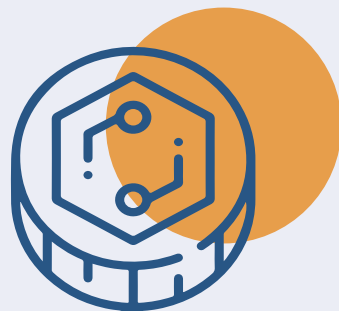

Tokenization is the process of issuing a digital representation of an asset on a blockchain.

Web3:

refers to a decentralized internet, controlled by participants via blockchains, offering a new era of the internet beyond profit-motivated corporations.

Blockchain:

s a digitally distributed, decentralized ledger that records transactions across a computer network, providing transparency and security.

Smart Contracts:

are software programs executed automatically when specified conditions, agreed upon by a buyer and seller, are met on a blockchain.

Tokenized Assets:

Tokenized assets involve creating digital representations of physical or non-tangible assets on a blockchain, enabling new forms of ownership and transactions.
