- Match the sentences with their corresponding definitions:

Sentences	Definitions
1. Design for automation	Prioritizing the adoption of cloud provider-managed services to reduce operational overhead, even at the risk of potential vendor lock-in.
2. Be smart with state	Implementing a security approach that emphasizes multiple layers of protection within a cloud-native architecture, including authentication, rate limiting, and component isolation.
3. Favor managed services	Architecting systems to automate infrastructure provisioning, continuous integration/delivery, scaling, and recovery processes, enhancing resilience and performance.
4. Practice defense in depth	Architecting components to minimize reliance on stored data, favoring stateless designs for easier scaling, repair, roll-back, and load balancing.
5. Always be architecting	Adopting a mindset of continuous refinement and improvement of the system's architecture to adapt to evolving organizational needs, IT landscapes, and cloud provider capabilities.
