1. Data partitioning, also known as _____ or data segmentation, is the process of dividing a large dataset into smaller, more manageable subsets called partitions or shards.

2. Each partition contains a subset of the data, and these subsets are typically distributed across multiple servers, nodes, or _____.

3. Horizontal partitioning, also known as _____, involves dividing the database schema into multiple partitions based on rows or records.

4. In vertical partitioning, database schema is divided based on _____ or attributes.

5. A partition key is an attribute or criterion used to _____ into partitions or subsets.
