

climate change

Clean Technology:

Technologies designed to have minimal environmental impact and contribute to sustainability.

Greenhouse Gasses:

Gasses that trap heat in the Earth's atmosphere, contributing to global warming.

Deployment:

The large-scale implementation and use of technologies or innovations.

Moore's Law:

The observation that the number of transistors on a computer chip doubles approximately every 18 months, leading to increased processing power.

Carbon Abatement:

Actions or technologies aimed at reducing carbon dioxide emissions to address climate change.
